Figure S1. SIINFEKL fails to therapeutically protect mice from E.G7 tumors. Therapeutic treatment of E.G7-bearing mice with SIINFEKL does not lead to immunity against the growing tumor. Naïve C57BL/6 mice were challenged with E.G7 cells on day zero. Tumor bearing mice were immunized subcutaneously with an emulsion of SIINFEKL and adjuvant on the same day (left panel), day 3 (middle panel) or day 5 (right panel) after the tumor challenge. Each line represents the growth of E.G7 tumor in one mouse. Experiment was performed twice.
